(Novara, Italy – 14 July 2021) - Subsequent to the project accomplished by Biffa and AMUT for the Seaham state-of-the-art recycling facility, one of the most modern and technically advanced in the world, the two players join forces again for Biffa’s new investment in its facility in Washington, Sunderland, UK.

During the prior collaboration, AMUT provided the UK waste material management organization with a custom-engineered 4,000 kg/h PET bottle recycling line, integrated with its ‘MINI-PRF’ frontend, for their plant capable of recycling 1.3bn plastic bottles, each year. A typical example of AMUT’s sorting and washing integration process in which the customer entrusts the AMUT technology with the bale at the entrance of the plant, obtaining a flake of very high purity at the end.

Following the first successful installation, Biffa has confirmed its confidence in the Italian recycling technology provider, for their high-density polyethylene (HDPE) new expansion project, to recycle 1.6bn milk bottles a year. AMUT contributed to the leading UK recycler and waste management manufacturer’s infrastructure, with its 2,000 kg/h recycling solution.

“Biffa is committed to enabling the circular economy in the UK and increasing plastic recycling is a key part of our strategy – by 2030 we hope to quadruple our currently plastic recycling capacity. Following a successful partnership with AMUT at our state-of-the-art Seaham facility we’re pleased to be working with
them again at our Washington facility where we are adding a further 14,000 tonnes of capacity to recycle HDPE plastic,” said Biffa Regional Engineering and Projects Manager Martin Brass.

Over the years, AMUT has proven to be a trusted leader in providing flexible recycling technology with a wide track record worldwide. The Italian company is deeply committed in generating value for customers, focusing on cutting-edge project design and execution for its integrated recycling turn-key plants as testified by the recent Biffa’s sustainable accomplishments.

AMUT and BIFFA “green cooperation” will be instrumental in reducing plastic pollution in the UK by improving the country’s ability to recycle through sustainable systems thus represents an important step towards a more environmentally sustainable future.

About AMUT

AMUT, established in 1958, is a global plastic processing, recycling and waste sorting & recovery systems designer and manufacturer. Over the years the company has evolved considerably providing customers with an increasingly extensive range of high quality Extrusion and Recycling, turn-key plants and related Services. The world Headquarters and production facility is AMUT S.p.A. which is located in Novara (Italy). Candelù (Italy) completes the manufacturing sites. Operating globally, the offices and customer service centers are strategically located in U.S.A., Canada and South East Asia. This international presence is further enhanced through an efficient worldwide agent network. Learn more at www.amutgroup.com
