

## **AMUT ACP 2000 P15 winder PROWIND proves to be the best available stretch winding solution on the market**

(Novara, Italy – 3 April 2020) – Lately, AMUT ACP 2000 P15 stretch film winder, whose last version was named PROWIND, has boosted high success around the globe.

Its originality at the beginning of this year was even proven by Milan's court with its decision to cancel 4 Italian patents presented by other company for stretch film winding.

This court decision is very important, but the most important aspect for AMUT is the customers' appreciation of this winder, resulting from the purchase orders for it.

The PROWIND winder concept allows its installation on whatever Cast Film Line, not depending on who it is manufactured by, resulting in high increasing of line output, state of the art shaped rolls and possibility to produce inline all three types of rolls: handy, machine and jumbo rolls, with roll maximum weight of 55 Kg. Last year, AMUT's Polish Customer Cast S.A., who is the biggest producer of pre-stretched film in Poland, installed their first PROWIND winder on their existing line. As the result of this winder performances, this customer ordered another two units, which will be installed on their existing lines.

Mr. Modlinski, president of Cast S.A. says: "Before purchasing the first PROWIND unit, being the same probably most expensive on the market, we checked all the various winders produced and offered in Europe. At that time, we thought that decision to go for PROWIND, considering the cost of the same, would have been approved by a significant increasing of our production output and by a remarkable improvement of our rolls quality. But we could not even imagine that, with this new PROWIND winder, our continuous production output with 17micron film on our existing 1500 mm wide, made in 2011, would have reached over 900 Kg/h. During the winder commissioning in our factory we ran different tests with the different formulations and we reached an impressive output of over 1100 Kg/h net. And this is only because of the extrusion section that we could not increase more but if the extrusion section would allow, with this winder we could easily reach even 1200 Kg/h net on 1500 mm wide machine."

As a result, an additional purchase order for 2 more units of PROWIND was placed by CAST S.A., the installation of which is scheduled for the second quarter of this year.

Besides these two units for our Polish customer CAST, within the second quarter of this year AMUT will deliver different PROWIND winding units to be installed on existing lines around the globe from Czech Republic to Malaysia.

#### **About AMUT**

AMUT (Automazione Macchine UTensili), established in 1958 is a global turn-key plastic processing and recycling systems designer and manufacturer. Over the years the company has evolved considerably and become a group of companies providing customers with an increasingly extensive range of high quality Extrusion, Thermoforming, Recycling, Flexo Printing and Converting machinery, turn-key plants and related Services. The world Headquarters and production facility is AMUT S.p.A. which is located in Novara (Italy). Operating globally, the group's offices and customer service centers are strategically located in U.S.A., Canada, Brasil and South East Asia. This international presence is further enhanced through an efficient worldwide agent network. Learn more at [www.amutgroup.com](http://www.amutgroup.com)
